Profile

I'm a full stack developer who loves solving software-related challenges, especially the ones where the hard part is working out the right approach rather than just writing the code. I'm open to freelance work and interesting problems, so get in touch and let's get things done.

Skills

LANGUAGES	English, Urdu, Punjabi
FRAMEWORKS	Next.js, Flutter, Capacitor, Playwright
TOOLS	Git, Node.js + pnpm, Neovim

Projects

DoL by Alex

An Android port of an open source Twine interactive fiction game, shipped as an offline native app.

- Migrated the native shell from Cordova to Capacitor 8.5.3 across 127 commits
- Pinned the WebView origin so player saves can never silently disappear
- Release build with R8 shrinking, 33.5 MB down to 26.4 MB
- Build script verifies v2 and v3 signatures and fails the build if either is missing
- Kept the whole shell inside the game repo so game and app never drift apart

`Capacitor` `Android` `JavaScript` `Gradle`

4 Games by Alex

Four playable games in one Android app, including chess driven by the real Stockfish 19 engine.

- Stockfish 19 lite packaged as a 1.7 MB WASM module inside the APK
- Worker based engine so the interface never blocks while the bot calculates
- Fixed illegal move generation and worker lifecycle bugs found on device
- R8 obfuscation and resource shrinking for release builds

`Kotlin` `Jetpack Compose` `Stockfish` `WebAssembly`

Photo Editor by Alex

A native Android photo editor built with Compose: layers, filters, text, drawing and cutouts.

- 42 Kotlin files split cleanly into a core engine and a Compose UI layer
- Separate gesture stage per layer type for transform, draw, text and tap select
- Project autosave and a native SAF export sheet
- Background removal through cutout composition

`Kotlin` `Jetpack Compose` `ExifInterface` `Kotlin Coroutines`

Education

Intermediate (FA) 2025

Private student · Lahore, Pakistan

Matriculation 2021

CDG Boys High School · Lahore, Pakistan
